

6.170 Final Project – “ibetcha”
Sunday December 7th, 2014

Peer Reviews by Dong Hyug Lim

Dana:

Dana mainly worked on cronjob and other server-side codes related to bets and milestones. She was very good at communicating ideas and debugging what problems we are facing. Dana is excellent at design and execution. I think that Dana can improve by writing test cases early on in the project, so that if there is a bottleneck, it would be easier for the rest of team to replicate the error.

Saadiyah:

Saadiyah worked on one of the most intricate parts of the project, which was generating milestones and checkoffs. It was great that we did not spend time debugging her code in the most complex part of the application. Saadiyah designs her code carefully. I think that she can improve by writing more modular code with more descriptive variable names (or more comments) early on.

Zulsar:

Zulsar was by far the most involved member of the team. She designs code carefully and writes modular functions. Zulsar was involved in most functionalities of the web application and debugged many of the problems we had to solve. Zulsar was a good communicator and coder.
