

6.170 Final Project – “ibetcha”

Sunday, December 7th, 2014

Team members: Zulsar Batmunkh, Saadiyah Husnoo

Jonathan Lim, Dana Mukusheva

Peer reviews

Dana:

Dana is a very good programmer and an awesome multitasker. She properly schedules any tasks and gets them accomplished within the timeframe and always reminds us of important deadlines. She's a member whom we can always count on. Her attendance and punctuality has made our team function much better. She's also very good in building consensus among the team. She creates an atmosphere where people can share their thoughts – good and bad. Not only she's a great coder, but also very good in quickly researching for answers and using other alternatives once we encounter any bugs. She did an awesome job in implementing our main bet/milestone server side logic together with Saadiyah and refactoring our old coupled codes and separating concerns. She also contributed in making our app look pretty.

Saadiyah:

Saadiyah is a great team player with a great communication and technical skills. She contributed to all parts of the project and did an awesome job in designing and implementing our app's main backbone specialties: bet/milestone. She learns new skills quickly and is also a very good pragmatic and planner. She always thinks, plans and researches before jumping into coding and her codes are well-written, flexible and reusable with a great consideration for future extensions and potential changes and improvements. Furthermore, she also contributed in making our front-end design look pretty and organized. She's also good at identifying problems and potential solutions.

Jonathan:

He's an excellent coder and designer with very good coding skills and experience. He loves coding and has innovative and brilliant ideas to design things and make our app more advanced and cool. His innovation, creativity and robust coding significantly improved our performance. He contributed a great deal both in the front-end and back-end codes and the design. With his help we all learned Angular.js and incorporated it into our project. He has a knack for trying new things and consistently takes initiatives in difficult situations. He was also responsible for many of our important additional features. He's always eager to improve our existing codes. He writes solid, robust and consistent codes. He's very good at recognizing potential threats and handling edge cases.
